

## Supplemental Data 2: Blood levels of IL7 and IL15

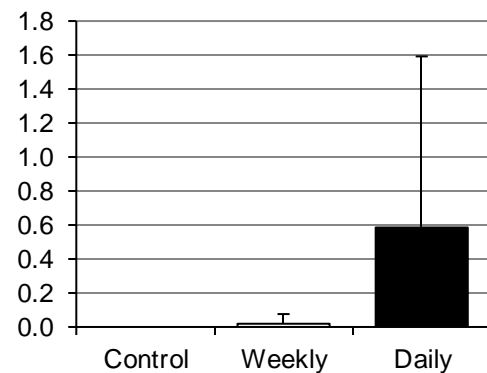

Cytokines levels was measured as described in the main text. For blood samples (left), the graphs depict cytokines levels at all time point for which the samples were collected: day 0, 7, 14, 21 and 28. For splenocyte supernatant (Right), bars represent the average of cytokine levels for all mice at euthanasia. IL7 was expressed at low levels in the supernatant of spleen. Exposure to the recording seems to increase both IL7 and IL15 production.

**IL7**

**Blood**

**Spleen**

**IL15**
